SPECIFIC CONDITIONS FOR THE SUPPLY OF SOFTWARE IN SAAS MODE
ClickWrap

Section I - General provisions

1. Value of these Specific Conditions

These specific conditions of contract ("Specific Conditions") govern the supply of the Software identified above.
These Specific Conditions supplement the Additional Conditions and refer to the Services and Software identified in the Commercial Proposal.
In the event of conflict between the Additional Conditions and the Specific Conditions, the latter shall prevail.
The Definitions indicated in the General Conditions apply to these Specific Conditions.

Section II - Specific Conditions

A - Subject matter of the Service
The Service named ClickWrap is a SaaS application that allows the Client to generate and manage agreements in order to collect the consent or the refusal of its own Users in relation to specific topics/documents through a platform that enables the management and monitoring of each stage of the process (acceptance text, version of the document to be accepted, User data to be retained together with the consent, etc.).
The storage of the consent/refusal provided by the User shall take place by means of notarisation on blockchain.
For further details on the description of the Service, reference is made to the Commercial Proposal/Technical Documentation.

B - Access credentials
The Client may access the web platform of the Service through its own MyNamirial credentials, which it may create through the web page https://my.namirial.app/. The Client acknowledges that the request to delete its own MyNamirial credentials will result in the impossibility of accessing the ClickWrap Service as well as any further services activated through the same MyNamirial credentials.

C - Data management
Once processed, the information is pseudonymised by the Service. Clients have the option to decide which data to associate with the consent register; however, by default, the Service processes only the User's IP address.
The data is processed exclusively in order to be stored: in encrypted form on the servers and by means of a hash when recorded on the blockchain.
At a later stage, the Client may access the platform through its own credentials in order to access the data in clear text and in the event that the User modifies the consent given.
In particular, use of the Service takes place in six stages: (1) determination by the Client of the data to be processed; (2) compilation of a JSON file with the data determined in stage (1) when the User interacts; (3.a) hashing of the JSON file produced; (3.b) hashing of the hash obtained upon completion of stage (3.a), with the addition of an identifier relating to the transaction; (4) recording on the blockchain of the hash obtained at the conclusion of stage (3.b); (5) transmission of the JSON file in clear text to the ClickWrap servers (AWS); and (6) encryption of the data before it is stored on the ClickWrap servers.
Common personal data is processed during stages (2), (3.a and 3.b), (4), (5) and (6).

D - Effects of termination of the Service
Upon termination of the Contract, the data stored by the Client relating to its own Users is permanently deleted from the ClickWrap servers (AWS).
Once the data has been deleted from the ClickWrap server (AWS), the hash obtained at the end of the procedure described above (and specifically at the end of stage 3.b), that is to say the data recorded on the blockchain, is no longer attributable either to the transaction, or to the contract or consent, or to the User to whom the consent or the acceptance of the contract refers.
